

# paperwhites

*These bulbs are living organisms!  
For best results start this kit immediately.*

## INCLUDES:

- Glass Vase .....
- Paperwhite Bulbs .....
- Recycled Glass  
Grow Medium .....

## GROWING GUIDE:

1. Remove all contents from vase.
  2. Rinse grow medium to clean off dust, then pour it into vase.
  3. Add ½ cup water.
  4. Remove bulbs from burlap sack and place on top of grow medium with tips up. Anchor bulbs in vase by arranging grow medium around them. Water level should be well below bulbs — if bulbs sit directly in water they will rot.
  5. Place vase in cool spot and away from light (50°-60°F is ideal).
  6. Once roots are established and grip grow medium, move vase to a sunny window. (This will take around two weeks.) Tip: add 2 tsp of vodka to control growth and encourage blooms.
- If roots haven't started growing in 10-12 days, place vase in fridge until they do. (This may take up to 5 days.)
  - Monitor water level. Top off as needed but do not exceed 1" from the base of the vase.
  - Discard bulbs after blooming is finished.
